Subject: meeting with Stan van and Tom Downey
Date: 05/03/2006 04:30 PM

Chip and Eric:

Tom and I can come up to Portland May11 - next thursday if you are available.

My thoughts are an initial two hour meeting. I realize you two have a zillion meetings under your belts and this has all been mulled over and over but I would like to go back to square one and move on from there. I would like to hear the world according to you two - a summary of basic Superfund Process assessments that have passed and those to come, time frames, data needs (all species and from your perspective), models of use, etc. This is brief summary stuff not technical specifics. Next I would like to hear what you think the pros and cons are of particular proposed studies (all species) relative to available time frames and subsets of the PH process - and which agencies or parties might move these forward based on a "full world" view as Eric eluded to.

I think that would be a good starter day. I would then know where you two sit re the general overview. We could then move toward reconciling our differences for the two species of particular interest. Maybe we do this the same day or maybe we carry it to the next meeting the following week.

Let me know your thoughts.
